

Supply List

- Fur: 12" x 27" (1/6 yard - 5/8" medium density mohair w/ heirloom finish used for prototype)
 - 2 1/2" square piece of white mohair
 - 8" x 8" piece of wool felt or ultrasuede
 - 8mm black glass eyes (1 pair)
 - 2 - 1" fiberboard discs for neck
 - 4 - 1 1/4" fiberboard discs for arms
 - 4 - 1 1/2" fiberboard discs for legs
 - 10 small metal washers
 - 5 cotterpins (or bolts & lock nuts if you prefer)
 - Artificial sinew (or strong waxed floss)
- (For eyes & closing head)
- Pearle cotton (for nose & mouth)
 - Upholstery thread to match fabric backing
- (for hand sewing & attaching ears)
- Fiberfill
 - Stainless steel pellets (optional)
 - 18" of floral wire for wiring ears

OTHER SUPPLIES

Bunnies made from this pattern may be sold.
Pattern itself may not be copied, sold or redistributed.

9" Peter Rabbit

Artist Designed Bunny Rabbit Pattern

From www.TeddyBearAcademy.net

©Instructions & Pattern are copyrighted 2021

*The bunny you make from this pattern
is not intended to be a child's toy due to the glass eyes and pellets.*

**Do you need a little help making your bunny? I can SHOW you how with
online video classes at www.TeddyBearAcademy.net**

- 1) Trace pattern pieces onto paper, paste onto cardstock and cut out. A 3/8" seam allowance IS included
* OR: Print out the pattern directly onto heavy paper or cardstock.
- 2) Lay pattern pieces on wrong side of your fabric. Be sure the arrows on the patterns run in the same direction as the direction of the fur.
- 3) Trace around each pattern with a permanent marker or gel pen. Be sure to mark all joint marks and seam openings.
- 4) Cut out your pieces. It is important to cut ONLY the backing of the fabric with a sharp, small scissors. Cut on the INSIDE of the lines. My scissors of choice for this are Fiskars Softouch Micro-Tip Scissors. They are awesome! Their "Softouch" design really does a good job to help keep my hands from getting sore.
- 5) As you first pin your pieces together, be sure to tuck all the fur to the inside. This will give you nice clean seams.

Use enough pins so that the pieces do not slide around... the fur makes the pattern pieces want to shift a bit more than regular fabric would. Or you can now hand baste your bear parts together with a whip stitch, remove the pins, and then start sewing (either by machine or by hand).

6) SEWING

BODY: Fur sides together, match up the right and left body pieces together, pin, baste if you prefer, and sew. Leave an opening at the back to turn and stuff.

HEAD: Match 2 head side pieces together and sew the chin seam from the tip of the nose down to the neck opening. To insert the head gusset, match the line on the nose of the head gusset up to the seam of the 2 head sides. Tack in place at the seam. Pin the gusset in place then baste together with a whip stitch. Sew the gusset in place. I prefer to hand sew the front of the gusset in (the nose and eye area) and then I machine sew the rest.

ARMS: Match up the inner arms to the correct outer arms. Pin and sew.

LEGS: Match legs – be sure that each leg has one outer leg and one inner leg. The inner leg will have the joint marking. Pin and sew closed, making sure to leave the seam opening open – and also the bottom of the foot.

INSERT THE FOOTPAD: Match up the lines on the footpads to the seams on the feet. Tack in place. Pin the rest of the footpad in place, baste together with a whipstitch. Sew in place with a backstitch.

EARS: Match up one inner ear (felt) with one ear (fur). Stitch, leave the straight edge open and also about 1" up from the bottom edge.

Turn all pieces right side out, use a needle or awl to pick out fur that may be trapped in the seams.

7) STUFFING

ARMS: I like to take my fiberfill stuffing and pull it apart into small balls of fluff about an inch or larger in diameter. Take your first couple of bits and stuff it firmly (with your stuffing tool – using the tool really does help get it nice and firm!) into the arm, all the way to the tip of the paw pad. Be sure to stuff the paw pad area nice and firm.

Now insert the joint assembly. Take your awl or sharpened chopstick and find the joint marking on the inside of the arm. Pierce the mohair fabric... try to just separate the threads and not cut them if possible. Make an opening just large enough for your joint hardware to go through. The disc will be on the inside of the arm.

Now to finish stuffing the arm. Do you want a firm bunny or a slightly squishy bunny? Stuff the rabbit until he feels right to YOU. As you near the seam opening... slow down

stuffing a little. You need to allow some fabric for closing the seam. Close your seam using your upholstery thread.. doubled... I like to start closing my seams before he's quite all the way stuffed. As I close, I add little bits more of stuffing... so he's not too soft, not too hard... but juuuust right! (Sorry, couldn't resist!)

After you have finished closing the seam, tie it off and hide the threads
Now that the arm is done, set it aside and finish the other parts....

LEGS: I stuff my legs much the same way I stuff my arms... but with one difference. I often add glass pellets to my bunny's feet. It helps them to stand up.

I like to start with a small layer of fiberfill in the bottoms of the feet... and then I add my pellets, bb's or what have you. I then add more fiberfill to the top of the foot and up the ankle a bit. I recommend stuffing this area firmly with some fiber fill also to give him support to stand.

Assemble your leg joint. Take your awl or sharpened chopstick and find the joint marking on the inside of the leg. Remember... you will have 1 Right Leg and 1 Left Leg! Now pierce the mohair fabric... try to just separate the threads and not cut them if possible. Make an opening just large enough for your joint hardware to go through. The disc will be on the inside of the leg.

Now to finish stuffing the leg. Do you want a firm bunny or a slightly squishy bunny? Although I recommend firmly stuffed legs, stuff the rabbit until he feels right to YOU. As you near the seam opening... slow down stuffing a little. You need to allow some fabric for closing the seam. Close your seam using your upholstery thread.. doubled...using a ladder stitch. I like to start closing my seams before he's quite all the way stuffed. As I close, I add little bits more of stuffing here and there to fill in.

After you have finished closing the seam, tie it off and hide the threads.

Head

STUFFING

You want to stuff the head nice and evenly. Are you right handed or left handed? I am right handed and like to hold the bear's head in my left hand, and stuff with my right hand. If you are left handed, you may want to do it the other way around.

I like to stuff the nose first. Take small bits of stuffing and stuff FIRMLY into the nose. This part must be very firmly stuffed as it will make it much easier when you embroider his nose.

I usually stuff the nose area about 1/3 – 1/2 way to start and then start adding stuffing to the rest of the head. Now I finish stuffing the nose... very firmly. I find that doing it this way helps to keep the stuffing in the nose area.

When I stuff the head, I turn it in a circle as I add fiberfill. It helps me to keep my stuffing job even when I do it that way. Make sure the head, and especially the nose, are very firmly stuffed.

Now... if you wanted to.. you *could* insert your neck joint and close up the head.... But I like to embroider the nose while the neck is still open. I like to be able to add more

stuffing as needed, or shift it if necessary while I am embroidering the nose. My directions will be written in that order as that is how I do it. But you can change that order around if you prefer!

EMBROIDERING the NOSE

When I am doing a nose, I like to use the 3 inch needle... a good sharp one!

Take your scissors and trim the fur away from the area where you will embroider the nose.

Start with a length of pearle cotton about 30" long. Look at the photo on the front of the pattern as a guide.

If you have trouble getting the needle thru sometimes, use your needle nose pliers to help you. I use mine a lot!

I enter the bunny's nose through the side, and don't pull the pearle cotton all the way through, let a short tail hang out... don't put a knot in the end of the floss! Bring your needle up near a top corner of where you want your nose to be, and then down to the tip of the nose. .

Bring the needle up to the other top corner of the nose. Bring it back down to the tip of the nose and pull taught.

Bring the needle up about a quarter inch below the tip of the nose, then insert back through the tip of the nose, bring the needle up through the bottom corner of where you want one side of the mouth to be and pull taught.

Insert needle at the bottom of the line below the nose, bring back up at the opposite bottom corner of the other side of the mouth. Pull taught. Remove the 3" needle and thread the pearle cotton onto a 5" needle. Insert the needle into the bottom of the line below the nose and pull out the bottom of the head.

With your next stitch, put the needle in the same spot where you brought the pearle cotton out and go thru to the back of the head to the other side of the head. Pull it nice and taut and snip the pearle cotton. Snip the tail that was left on the front of the head.

**Now... as I am stitching the nose with the neck still open, I keep adding little bits of fiberfill here and there as needed. I also am able to re-adjust the snout to be centered as it sometimes goes a little lopsided while I am stitching the nose.

CLOSING THE NECK

Now your head is all stuffed.. and if you chose to do the nose first, it is all stitched. Time to close up the neck.

Assemble your neck joint assembly. Sit the bunny's head in your lap or on your table upside down so the opening is up. Set the assembled joint inside. Thread your waxed thread/floss on your 3" needle and sew a gathering stitch all around the neck opening. Leave a long tail to start and to end. I like to start and end at the back of the neck.

First make sure both tail ends are about the same length and pull the opening closed tightly. Tie a square knot. The waxed thread really helps here as it helps to keep the knot. I don't stop there, however. I want to be sure this stays closed ☺

Now I take each tail end of the floss and make large back stitches all round the joint, ending up at where I started. Do this with both tails. Now tie another square knot and sink the tails into the head (take your large 5" needle and go into the head right next to the knot, going thru to the other side of the head. Tug to pull the knot on the other side and then snip off the tails that now come out on the top part of the head. You now have a VERY secure neck joint!

The Eyes

To insert the eyes you will need: The pair of glass eyes, the pair of waxed eye floss strands (should all be in the same packet) 5" long needle, needle nose pliers, awl (or sharpened chopstick), ball headed straight pins.

First, fold each length of eye floss in half. Be sure each ½ is even. Now, loop end first, thread that thru the wire on each glass eye

Pull the loop a little bit thru the eye wires, now take the tail and pull it thru that loop:

Now pull the tails tightly, and you have tied the glass eye to the waxed floss securely.

Take a look at your bunny... where do you want the eyes to be? Use your ball headed pins to help you place them. The common place is right where the forehead starts to slope up, just on the outside of the gusset seam. Be sure NOT to place them directly on the seam as that will weaken the head. Move the eyes (pins) away from and closer to the gusset to see which look pleases you best.

When you are ready to insert the eyes, first, thread the tails of the waxed floss from one of the eyes onto your 5" needle. Take your awl (or chopstick) and carefully poke a small hole (separate the threads of the backing) where one of your pins is located. Now, take your threaded 5" needled and insert it thru that hole, coming out down at the neck of your bear, on the opposite side of the eye. Do the same for the other eye. At the back of the bear now, separate the tails of the floss for one of the eyes. With one tail, take a small stitch so it is next to its other tail, but not in the same hole. Do the same for the other eye's floss tail.

Carefully tie one knot (just over once) and pull gently. Push gently on the eyes to help them sink in... but you don't want to pull too tightly and accidentally break the glass eyes! Pushing gently on the eyes helps sink the eyes without breaking them. Now go back to those floss tails and tie a square knot. Sink the ends

Jointing the Bunny

Now he's really coming together! It's time to put all of your bunny's parts and pieces together now. I like to start with the head. There is a small gap (marked on the inside) in the neck seam where his head joint will fit. I use my sharpened chopstick to GENTLY open this area up. I push it thru from the inside to out. I don't poke it all the way thru, I just want the point to come out to the fur side.

Take your jointed head, and slip the joint hardware thru the neck opening. Now turn the body slightly inside out, so you can slip the 2nd neck disc and 2nd large washer over the hardware that is now sticking into the inside of the bear's body. Now secure your joint. (turn the cotter pin, tighten the nut...)

I attach the arms next, ending with the legs. To attach the limbs, take your awl or chopstick and gently poke a hole (separate the threads) at the joint markings. Make an opening just large enough for each cotter pin or bolt to go through. Attach the limb (Make sure it is facing in the correct direction!!). Now take the limb disc & washer and slip them over the cotter pin or bolt on the inside of the body in the order listed. Now, tighten each joint on the inside to secure each limb to the body.

Now you have your bear all assembled and it's time to fill his tummy!

You can make your bunny as firm or as squishy as you like, but it is easier for your bunny to sit up if he is at least slightly firm. This is how I stuff my bears & bunnies...

I start with a thin layer of fiberfill in the bottom, especially around the leg joints. Then, I usually add my pellets for weight. I prefer glass pellets, but you could use plastic pellets, stainless steel bb's,...) How many do you add? I just pour some in and then feel how heavy the bear is. Till he feels right to you!

Now add more fiberfill. I find it easier at this point to lay him on his tummy, face down. Keep adding fiberfill till he is the firmness you like. Don't forget to add fiberfill at his neck! This is an area that is very important so he can hold his head up. Close up his back with a ladder stitch adding small bits of fiberfill as you close... as needed.

You can now sit your bunny up to face you so that you can finish his face!

The Ears

Using a wire cutter (on the inside of most needle nose pliers) cut the wire into 9" lengths.

Shape each wire into the same of the ear and insert into each ear. Wrap wire ends around itself to secure.

Using a 24-30" length of upholstery thread, ladder stitch the small side of the ear that was left open, then whipstitch the bottom of the ears closed, When whipstitching, wrap the thread around the wire that runs along the bottom of the ear. Do NOT cut off the end! Tie off a quick knot to secure it, but leave the thread hanging from each ear. You will use these to attach them to the head.

Now you have 2 closed ears with threads hanging from them. Position the ears onto your bunny & pin them to your bunny's head. Move them about until you are happy with their placement. To make sure they are even, take a look at your bunny in the mirror, and also look down on his head from above. These tricks can help you place them evenly.

When you have the ears placed as you like, you just whipstitch them into place (removing pins as you go) – very much like how you closed the ears in the first place. But... on the ears when you just brought the thread OVER the ear and went thru on the front, you will bring the needle through the head instead.

When you finish at the bottom of the ear, tie a knot and hide the threads just like you did when you closed the seams.

Now you can brush your new friend and accessorize him if you like!

I hope you enjoyed creating Peter Rabbit!
